

Process innovation through emerging technologies

Training, independent evaluation and validation for companies that want to explore and implement emerging technologies.

- **Challenge test/validation studies**
With pathogens and surrogates
- **Improving product performance**
Quality, functionality, texture and structure
- **Feasibility/benchmarking**
Assess product suitability or reformulate to optimise emerging process
- **New applications with existing technology**
UV-C in pack processing
- **Technology road mapping**
Identify key technologies to achieve your strategic goals
- **Bespoke training**
Technology, application or product focused
