Contents

- An overview of sensor technology in practice: The user's view
- The influence of reference methods on the calibration of indirect methods
- Ultrasound: New tools for product improvement
- Use of near infrared spectroscopy in the food industry
- Application of mid-infrared spectroscopy to food processing systems
- Applications of raman spectroscopy for food quality measurement
- Particle sizing in the food and beverage industry
- Online image analysis of particulate materials
- Recent advances in nondestructive testing with nuclear magnetic resonance
- Electronic nose applications in the food industry
- Biosensors: A theoretical approach to understanding practical systems
- Techniques based on the measurement of electrical permittivity
