Contents

Characterization of Food Safety and Risks

- Definition of food safety
- Characterisation of food hazards
- Risk analysis frameworks for chemical and microbial hazards
- Dose-response modelling for microbial risk
- Exposure assessment of microbial food hazards
- Exposure and dose-response modelling for food chemical risk assessment
- Economic consequences of foodborne hazards

Food Hazards: Biological

- Prevalence of foodborne pathogens
- Physiology and survival of foodborne pathogens in various systems
- Characteristics of biological hazards in foods
- Contemporary monitoring methods

Food Hazards: Chemical and Physical

- Hazards from natural origins
- Chemical and physical hazards produced during food processing, storage and preparation
- Hazards associated with nutrient fortification
- Monitoring chemical hazards: regulatory information
- Hazards resulting from environmental, industrial and agricultural contaminants

Systems for Food Safety Surveillance and Risk Prevention

- Implementation of FSIS regulatory programs for pathogen reduction
- Advances in food sanitation: use of intervention strategies
- Use of surveillance networks
- HACCP

Safety Operations in the Food Industry: Processing, Packaging, Handling, and Distribution

- Food plant sanitation
- Food safety control systems in food processing
- Food safety and innovative food packaging
- Safe handling of fresh cut produce and salads
- Good manufacturing practices: prerequisites for food safety

Food Safety in retail foods

- Commercial food service establishments: the principles of modern food hygiene
- Institutional food service operations
- Food service at temporary events and casual public gatherings

Diet, Health and Food Safety

- Medical foods
- Food fortification
- Sports nutrition
- Dietary supplements
- Functional foods and nutraceuticals
World-Wide Safety Issues

- International organisation for standardisation ISO 9000 and related standards
- Impact of food safety on world trade issues
- United States import/export regulation and certification
- European Union regulations with an emphasis on genetically modified foods
- FAO/WHO food standards program: Codex Alimentarius
