

CONTENTS

1.	INTRODUCTION - Why sample the food processing environment?	1
2.	ROUTES OF CONTAMINATION	3
2.1	Surfaces	3
2.2	Water	5
2.3	Personnel	6
2.4	Air	8
3.	SAMPLING STRATEGIES	9
3.1	Which microorganisms should I sample for?	9
3.2	When should I sample?.	9
3.2.1	Process development	10
3.2.2	Routine hygiene testing	11
3.2.3	Troubleshooting	14
4.	SAMPLING SITE AND FREQUENCY	16
4.1	Sampling site	16
4.2	Sampling frequency	18
5.	SAMPLING METHODS	21
5.1	Introduction	21
5.2	Surfaces	22
5.2.1	Open surfaces	22
5.2.1.1	Swabs	22
5.2.1.2	Wipes and sponges	24
5.2.1.3	Contact plates	24
5.2.1.4	Sampling dry food environments	25
5.2.1.5	Food products	25
5.2.2	Closed surfaces	26
5.2.2.1	Rinses	26
5.2.2.2	Product	26
5.2.2.3	Packaging	27
5.3	Water	27
5.4	Personnel	28
5.5	Air	29
5.5.1	Introduction	29
5.5.2	Sedimentation	29
5.5.3	Air volume counts	30

5.6	Rapid methods	31
5.6.1	Introduction	31
5.6.2	ATP	32
5.6.3	Protein analysis	33
5.6.4	DEM/DEFT	34
5.7	Methods selection	35
6.	SAMPLE TRANSPORT AND PROCESSING	37
6.1	Sampling fluids	37
6.2	Neutralisation	38
6.3	Time, temperature and transport systems	40
6.4	Microorganism recovery	41
6.5	Disposal	41
6.6	Validation	42
7.	INTERPRETATION OF RESULTS	44
7.1	Records	44
7.2	Setting internal standards	44
7.3	Meaning of single, atypical results and actions to be taken	47
7.4	Trend analysis and process control	50
7.5	Molecular typing	51
	REFERENCES	53
	ANNEX	58
	Factory 1 - Sliced Ham Production	59
	Factory 2 - Milk Production	63
	Factory 3 - Smoked Salmon Production	67
	Factory 4 - Biscuit Production	70
