

# Guideline no. 71

## Food allergens: practical risk analysis, testing and action levels

H.E. Arrowsmith, A.J. Alldrick,  
J. Banks\* and H.M. Brown

\*Section 3 'A systematic approach to identifying sources of food allergens as either ingredients or contaminants' is presented with kind permission of Ms. Julia Banks of Food Integrity Consulting Ltd.

# Contents

	Page no.
<b>1. Background and purpose</b>	<b>1</b>
1.1 Why has this document been written?	1
1.2 Who is the document intended for?	2
1.3 What does the document include?	2
1.4 What doesn't the document include?	4
<b>2. Allergen risk analysis</b>	<b>5</b>
2.1 Introduction	5
2.2 Risk analysis terminology	5
2.3 How does allergen risk analysis fit in with food safety management systems?	6
<b>3. A systematic approach to identifying sources of food allergens as either ingredients or contaminants</b>	<b>11</b>
3.1 Purpose	11
3.2 Risk assessment <b>Method 1</b> - Applicable to the majority of food manufacturers	11
3.3 Risk assessment <b>Method 2</b> - Highly complex factories	20
<b>4. Allergen testing</b>	<b>22</b>
4.1 Situations in which to test for food allergens	23
4.2 Questions to ask and information to provide to allergen testing labs	26
4.3 Sampling for food allergens	27
4.3.1 Sampling plans for food allergens	28
4.3.2 Food samples: raw materials, part-manufactured product, final product	29
4.3.3 Flushes	30
4.3.4 Surfaces and personnel: swabbing	30
4.3.5 Rinse or wash waters	34
4.3.6 Air	34
4.4 Available tests for food allergens	35
4.4.1 Protein detection methods - ELISA and LC-MS/MS	35
4.4.2 DNA detection methods - PCR	36
4.4.3 Appropriate tests for cleaning validation and verification	36
4.4.4 Can ATP or general protein tests be used to detect food allergens as part of cleaning verification?	37
4.5 Interpretation of food allergen testing results	38

<b>5. Considerations for testing in the context of action levels</b>	39	
5.1 Selecting the method of analysis in view of food allergen action levels	40	
5.1.1 Specificity of tests	40	
5.1.2 The need for quantitative tests	40	
5.1.3 Sensitivity of tests: limits of quantification and detection	42	
5.1.4 Considering measurement uncertainty	43	
5.2 Preparing results of food allergen testing for comparison with action levels	43	
5.2.1 Confidence in the results of testing: are the results correct?	44	
5.2.2 Converting results of testing to protein content	45	
5.2.3 Comparing results of testing to an action level	46	
<b>6. The use of 'action levels' in determining the need for precautionary labelling</b>	46	
6.1 Precautionary labelling	46	
6.2 Concepts	47	
6.2.1 Reference dose	47	
6.2.2 Action levels	48	
6.3 What determines whether or not Action Levels can be used?	49	
6.4 Calculating portion size	53	
6.5 Discussion	54	
6.6 Calculation and application of Action Levels: Worked examples	55	
<b>7. References</b>	59	
<b>Appendices</b>		
Appendix 1	Details of initiatives providing information on reference doses and action levels for food allergens	62
Appendix 2	Risk analysis terminology	63
Appendix 3	Guidance on determining remote and probable risk	66
Appendix 4	Selecting the method of analysis	68
Appendix 4.1	Are specific tests available for the allergen/s to be monitored and what types of tests are available?	69
Appendix 4.2	Why choose one method of analysis rather than another?	70
Appendix 4.3	Which available testing method is most applicable to the sample types?	72
Appendix 4.4	Is there a possibility of cross-reactivity with any other ingredients in the product or in the factory?	73
Appendix 4.5	Do we need to know how much allergen is present or just that it is present?	73
Appendix 4.6	What is the limit of detection, limit of quantification and measurement uncertainty for the method of analysis?	73
Appendix 4.7	Is there anything which may influence the result of the test?	75
Appendix 4.8	Test kit validation, accreditation and proficiency	76
