

## Contents

	Page no.
1. General requirements; cooking, pasteurisation and sous vide processing	1
1.1 Cooking, pasteurisation and sous vide food processing	1
1.1.1 Cooking processes	1
1.1.2 Pasteurisation processes	2
1.1.3 Sous vide processes	3
1.2 Integrating process validation with HACCP: critical control factors	4
1.3 Thermal process authority	5
1.4 Definitions used in thermal processing	7
2. Set up and design of the thermal process	10
2.1 Process targets for food safety	10
2.2 Process optimisation for food quality	12
3. Instrumentation for thermal process validation	13
3.1 Temperature probes	13
3.2 Biological methods	13
3.3 Time-temperature indicators (TTIs)	15
4. Conducting temperature distribution studies	17
4.1 General principles	17
4.2 Methods for temperature distribution testing	18
4.3 Data analysis and reporting of temperature distribution results	18
5. Conducting heat penetration studies	20
5.1 General principles	20
5.2 Methods for heat penetration testing	20
5.3 Data analysis and reporting of heat penetration results	23
6. Another method of measuring of thermal process performance	24
7. Post-process handling and cooling	25
7.1 General principles for control	25
7.2 Validation of cooling processes	25
7.3 Interpretation of cooling data	26
8. Ongoing monitoring and verification of the thermal process	28
8.1 Process records	28
8.2 Monitoring and verification	29

9. Handling process deviations	30
10. References and relevant publications	32
