

# CONTENTS

1.	Introduction	1
1.1	Why process food?	1
1.2	How does food deteriorate?	3
1.3	Why are some food materials not safe?	6
1.4	How do established technologies work?	7
1.5	Why seek new technologies?	11
1.6	Are these developments regulated?	12
2.	Developments with established technologies	15
2.1	New approaches for heat preserved foods	15
2.2	Emerging technologies for frozen foods	22
2.3	New and emerging drying technologies	26
2.4	Conclusions	33
3.	High pressure processing	34
3.1	Introduction - principles and equipment	34
3.2	High pressure processing and micro-organisms	41
3.3	High pressure processing and food components	44
3.4	High pressure in food processing	47
3.5	The next generation of HPP products	49
3.6	Conclusions	50
4.	Food irradiation	51
4.1	Introduction	51
4.2	Irradiation types, doses and methods	53
4.3	Effects on micro-organisms	55
4.4	Effects on food components	56
4.5	Effects on sensory properties	58

4.6	Food preservation and processing applications	58
4.7	Regulatory control of food irradiation	61
4.8	The future of food irradiation	65
5.	Power ultrasound	67
5.1	Introduction	67
5.2	Ultrasound inactivation of micro-organisms	69
5.3	Inactivation of enzymes using power ultrasound	73
5.4	Ultrasound and food processing	74
5.5	Conclusions	80
6.	Pulsed electric fields	81
6.1	Introduction	81
6.2	Basic engineering aspects of PEF	82
6.3	Effects of PEF on micro-organisms	83
6.4	Factors that affect PEF inactivation of micro-organisms	84
6.5	Effects of PEF on food enzymes	86
6.6	Potential uses for PEF - preservation applications	87
6.7	Potential uses for PEF - non-preservation applications	89
6.8	The future of PEF	89
7.	Other technologies with potential	91
7.1	Pulsed light	91
7.2	High voltage arc discharge	92
7.3	Oscillating magnetic fields	92
8.	Conclusions	93
9.	Selected references and further reading	94
