Introduction
G Talbot, The Fat Consultant, UK
- Introduction
- Enrobed and filled products
- Scope of the book
- Acknowledgements
- References

PART 1 FORMULATION

Chocolate manufacture
S Beckett, formerly of Nestlé Product Technology Centre, UK
- Introduction
- Raw materials
- Basic recipes
- Grinding
- Conching
- Quality
- Future trends
- Sources of further information and advice

Formulation of chocolate for industrial applications
P Yates, Barry Callebaut (UK) Ltd, UK
- Introduction
- Legislation
- Ingredients
- Formulation for industry sectors
- Speciality products
- Health aspects
- Future trends
- Sources of further information and advice
- References

Fats for confectionery coatings and fillings
G Talbot, The Fat Consultant, UK
- Introduction
- Crystal structure and polymorphism of fats
- Range of coating and filling fats
- Effects of fat on quality and processing
- Selecting the correct fat for application type
- Trans fats
- Future trends
- Sources of further information and advice
- References

Compound coatings
G Talbot, The Fat Consultant, UK
- Introduction
- Cocoa butter alternatives in compound coatings
- Recipes
- Flavourings and colourings
- Effects of formulation on sensory and functional properties
- Effect of fat choice on manufacturing process
- Future trends
- Sources of further information and advice
- References
Fat-based centres and fillings
J Birkett, Aarhus Karlshamn Denmark A/S, Denmark
- Introduction
- Effects of ingredients on quality
- Recipes
- Manufacturing processes
- Stability and shelf-life issues
- Future trends
- Sources of further information and advice
- References

Caramels, fondants and jellies as centres and fillings
W Edwards, Bardfield Consultants, UK
- Introduction
- Stability
- Ingredients
- Processing
- Products
- Gelled products
- The future
- Conclusions
- References

Biscuits and bakery products
M Brown, Burton Foods Ltd, UK
- Introduction
- Chocolate formulation
- Emulsifiers in chocolate
- Moisture barriers for caramel- and jam-containing biscuits
- Non hydrogenated coatings
- Processing
- Quality issues
- Fillings for bakery products
- Future trends in chocolate enrobing
- Sources of further information and advice

Chocolate and couvertures: applications in ice cream
D Cebula and A Hoddle, Unilever R&D, UK
- Introduction
- Features of ice cream and chocolate
- Application processes, formats, requirements, defects
- Inclusions in ice cream
- Future trends
- Sources of further information and advice
- References

PART 2 PRODUCT DESIGN

Product design and shelf-life issues: oil migration and bloom
G Ziegler, Penn State University, USA
- Introduction
- Mechanisms of oil migration and fat bloom
- Detection
- Optimizing product quality in relation to oil migration and fat bloom
- Future trends
Product design and shelf-life issues: moisture and ethanol migration
G Talbot, The Fat Consultant, UK
- Introduction
- Mechanism of moisture migration
- Measurement of permeability
- Reducing moisture migration
- Alcohol (ethanol) migration
- Future trends
- Sources of further information and advice
- References

Shelf-life prediction and testing
P Subramaniam, Leatherhead Food International, UK
- Introduction
- Shelf-life testing methods
- Sensory changes during storage of chocolate confectionery
- Shelf-life prediction
- Future trends
- Sources of further information and advice
- Acknowledgements
- References

Controlling the rheology of chocolate and fillings
M Wells, formerly of Cadbury Trebor Bassett, UK
- Introduction
- Defining rheological terms
- How to measure the rheology of chocolate and fillings
- Typical chocolate flow curves
- Factors affecting chocolate rheology
- The rheology of fillings
- Issues with shell moulding
- Issues with enrobing
- Issues with one-shot depositing
- Dealing with viscoelasticity
- Sources of further information and advice
- References

Using microscopy to understand the properties of confectionary products
K Groves, Leatherhead Food International, UK
- Introduction
- Microscopy techniques and their uses
- Relationships between the microstructure of chocolate and coatings and their properties
- Future trends
- References

PART 3 PROCESSING, PACKAGING AND STORAGE

Ingredient preparation: the science of tempering
K Smith, Unilever Colworth, UK
- Introduction
- Effects of tempering on quality
- Polymorphism and phase behaviour of triacylglycerols
- Cocoa butter polymorphism
- Changes during tempering
- Factors affecting tempering
- Measurement of temper
- Future trends
- Sources of further information and advice
- References

**Ingredient preparation: tempering process technology**
*K Richter, Sollich KG, Germany*
- Introduction
- Characteristics of cocoa butter
- Chocolate tempering
- Chocolate coating
- Chocolate moulding
- Aerated chocolate
- Future trends
- References

**Manufacturing processes: enrobing**
*M Bean, Baker Perkins Ltd, UK*
- Introduction
- Types of enrobing machines
- Centre preparation and presentation to the enrober
- Chocolate application case study
- Chocolate handling systems within the enrober
- Environmental and hygiene issues
- Ancillary equipment
- Typical operating parameters
- Faults and remedies
- Future trends
- Sources of further information and advice
- Acknowledgements
- References

**Manufacturing processes: chocolate panning and inclusions**
*G Geschwindner and H Drouven, Drouven & Fabry GmbH, Germany*
- Introduction
- Centres and raw materials
- Preparation of the centres: precoating
- Panning process
- Finishing
- Equipment
- Future trends
- References

**Manufacturing processes: production of chocolate shells**
*J Meyer, Bühler Bindler GmbH, Germany*
- Fundamentals of chocolate shell production methods
- Cold stamping technology
- Depositing, vibrating, cooling and demoulding
- Discussion of process conditions and product quality
- Faults, causes and solutions
- Future trends
- Sources of further information and advice
- References
Manufacturing processes: deposition of fillings
J Meyer, Bühler Bindler GmbH, Germany
- Modern processes for depositing fillings into pre-made shells: One-shot technology
- One shot process conditions and product quality
- Faults, causes and solutions
- Future trends
- Sources of further information and advice
- References
