Contents

Part 1 Raw materials and products

- Raw material selection: fruit, vegetables and cereals - Introduction
- Raw material selection: dairy ingredients
- Raw material selection: meat and poultry
- Raw material selection: fish
- Non-microbial factors affecting quality and safety
- Chilled foods packaging: an introduction
- Modified atmosphere and active packaging of chilled foods

Part 2 Technologies and processes in the supply chain

- Microbiological hazards and safe design
- Non-microbial hazards and safe process design
- The hygienic design of chilled food plants and equipment
- Cleaning and disinfection of chilled food plants and equipment
- Operation of plants manufacturing chilled foods
- Refrigeration, storage and transport of chilled foods
- Temperature monitoring and measurement

Part 3 Microbiological hazards

- Chilled foods microbiology
- Predicting the behaviour of micro-organisms in chilled foods
- Conventional and rapid analytical microbiology

Part 4 Safety and quality management

- Shelf-life of chilled foods
- Sensory quality and consumer acceptability
- Management of product quality and safety
- Legislation and criteria
