Contents

PART 1 PROCESSED MEATS: MARKET-DRIVEN CHANGES, LEGISLATIVE ISSUES AND PRODUCT DEVELOPMENT

Consumer demands and regional preferences for meat
L B Catlett, New Mexico State University, New Mexico
- Introduction
- The effect of taste on meat consumption
- The effect of choice on meat consumption
- Determinates of consumer demand for meat
- Consumption patterns of meat and economic data for selected countries
- Future trends in meat consumption
- References

Processed meat products: Consumer trends and emerging markets
M D de Barcellos, Federal University of Rio Grande do Sul (UFRGS), Brazil, K G Grunert and J Scholderer, Aarhus University, Denmark
- Introduction: Processed meats and modern life dilemmas
- Consumer judgment of meat quality
- Ongoing consumer trends
- New positioning strategies for the meat industry
- Emerging markets
- Future trends
- Sources of further information and advice
- References

Food safety and processed meats: globalisation and the challenges
P Wall and J Kennedy, University College Dublin, Ireland
- Introduction
- Trade liberalisation
- Safety of processed meat from a nutritional point of view
- Conclusions
- References

Listeriosis, salmonellosis and verocytotoxigenic Escherichia coli: significance and contamination in processed meats
C C Adley and C Dillon, University of Limerick, Ireland
- Introduction
- Listeria monocytogenes
- Escherichia coli
- Salmonella
- Conclusions
- References
- Appendix: glossary

The use of irradiation in processed meat products
E J Lee, Iowa State University, USA and D U Ahn, Iowa State University, USA and Seoul National University, Korea
- Introduction
- Control of pathogens in processed meat products
- Effects of irradiation on meat quality
- Prevention of quality changes in irradiated processed meat
- Future trends
- Acknowledgement
- References
Regulation of processed meat labels in the European Union
M Fogden, Agriculture and Horticulture Development Board, UK
- Introduction
- The EU general food law regulation
- Labelling and claims rules
- Other measures
- Codex Alimentarius ('food code')
- Provision of food information to consumers
- Sources of further information and advice
- References

Use of sensory science as a practical commercial tool in the development of consumer-led processed meat products
M G O'Sullivan and J P Kerry, University College Cork, Ireland and D V Byrne, University of Copenhagen, Denmark
- Introduction
- Past and present status of sensory based quality control in processed meats
- State of the art: an overview of specific sensory science methodologies and approaches used for processed meat product development
- Future trends: a holistic implementation of sensory science at key stages of meat product development
- Conclusions: success in processed meat product production development: sensory science-based development of successful consumer processed meat products
- Case studies
- Acknowledgements
- References

PART 2 INGREDIENTS: PAST AND FUTURE ROLES IN PROCESSED MEAT MANUFACTURE

Scientific modeling of blended meat products
R A LaBudde, Least Cost Formulations, Ltd and T C Lanier, North Carolina State University, USA
- Introduction
- The least-cost formulation (LCF) model
- Linear science-based models for meat product properties
- Solving the LCF-SBM problem
- Advanced topics
- Conclusions
- References

Blood by-products as ingredients in processed meat
D Parés, E Saguer and C Carretero, University of Girona, Spain
- Introduction: blood characterisation, recovery and processing
- Applications of blood in processed meat products
- Future trends
- Sources of further information and advice
- References

Utilisation of hydrocolloids in processed meat systems
R McArdle and R Hamill, Teagasc Food Research Centre, Ireland and J P Kerry, University College Cork, Ireland
- Introduction
- The meat matrix
- Challenges faced by the meat industry today
- Regulation and scrutiny concerning hydrocolloid usage in processed meats
- Application of hydrocolloids in processed meats
- Future trends and conclusions
- References

**Use of cold-set binders in meat systems**
*J A Boles, Montana State University, USA*
- Introduction
- Meat source
- Traditional restructured meat products
- Cold-set binders
- Particle size reduction
- Binder comparisons
- Advantages of restructuring
- Advantages of cold set binders
- Restructured meat products quality control
- References

**Using natural antimicrobials to improve the safety and shelf-life stability of processed meat products**
*A Lauková, Slovak Academy of Sciences, Slovakia*
- Introduction
- Range of natural antimicrobials for food application
- Combined effect of natural antimicrobials and/or other barriers
- Food grade sanitisers: natural adjuncts as indirect sanitisers
- Advantages of natural antimicrobials and new perspectives for their application
- References

**Reducing salt in processed meat products**
*J M Barat, Universidad Politécnica de Valencia, Spain and F Toldrá, Instituto de Agroquímica y Tecnología de Alimentos (CSIC), Spain*
- Introduction
- Influences of salt on processed meats
- Development of processed meats with low salt content
- Sources of further information and advice
- References

**Reducing fats in processed meat products**
*S Barbut, University of Guelph, Canada*
- Introduction: importance of reducing fat in processed meat products
- Role of fat in processed meat products
- Consequences of reducing fat in processed meats from an organoleptic and functional perspective
- Technological methods to reduce fat
- Saturated fat replacement using healthier fats
- Alternative fat replacing ingredients
- Future trends
- Sources of further information and advice
- References

**The use of nutraceuticals in processed meat products and their effects on product quality, safety and acceptability**
*J Hayes and N Brunton, Food Research Centre, Ireland*
- Introduction
- Nutraceuticals and processed meats
- Product quality
- Microbial safety
- Acceptability
- Future trends
- References

**Use of probiotics and prebiotics in meat products**
K Arihara and M Ohata, Kitasato University, Japan
- Introduction
- Probiotics
- Probiotics and meat fermentation
- Prebiotics
- Meat protein-derived prebiotic peptides
- Prebiotics and meat products
- Future trends
- Sources of further information and advice
- References

**PART 3 PROCESSING TECHNOLOGIES: PAST AND FUTURE ROLES IN PROCESSED MEAT MANUFACTURE**

**Marinating and enhancement of the nutritional content of processed meat products**
S M Yusop, M G O’Sullivan and J P Kerry, University College Cork, Ireland
- Introduction
- Background and terminology associated with marinating
- Marinade action: absorption and retention in a marinating system
- Functional ingredients of marinating
- Methods of marinade delivery
- Established effects of marinating
- The significance of sensory evaluation in determining quality of marinated products
- Future research in marinating technology
- References

**Improving the quality of restructured and convenience meat products**
M M Farouk, Ruakura Research Centre, New Zealand
- Introduction
- Restructured whole tissue and convenience meat products
- Quality issues of restructured whole-tissue and convenience meat products
- Improving product quality
- Future trends
- Sources of further information and advice
- References

**Heat and processing generated contaminants in processed meats**
P Šimko, Food Research Institute, Slovak Republic and Brno University of Technology, Czech Republic
- Polycyclic aromatic hydrocarbons
- Biogenic amines
- N-nitroso (Nas) amines
- Heterocyclic amines
- Conclusions
- Acknowledgement
- References

**Improving the sensory quality of cured and fermented meat products**
F Toldrá, Instituto de Agroquímica y Tecnología de Alimentos (CSIC), Spain
- Introduction
- Biochemical basis for flavour development
- Basis for colour and texture development in cured meats
- Processing factors affecting sensory quality of cured meats
- Trends to accelerate the processes and/or improve the sensory quality of cured meat products
- Sources of further information and advice
- References

**Improving the sensory and nutritional quality of smoked meat products**
*E P Emmerson, Red Arrow Products, USA*
- The process of smoking muscle food products
- Advantages of using natural smoke condensates compared with traditional smoking technologies
- Application methods of liquid smoke condensates to muscle-based food products
- Conclusions and future trends
- Sources of further information and advice
- References

**Online quality assessment of processed meats**
*M O'Farrell, SINTEF, Norway*
- Introduction
- Meat composition and attributes
- Visual inspection of products
- Food safety
- Automation and integration of the quality measurements
- Sources of further information and advice
- References

**Impact of refrigeration on processed meat safety and quality**
*S J James and C James, Food Refrigeration and Process Engineering Research Centre (FRPERC), UK*
- Introduction
- Current understanding of the impact of refrigeration on processed meat safety and quality
- Advances in technology and practice to improve processed meat safety and quality
- Future trends
- References

**Recent advances in the application of high pressure technology to processed meat products**
*Y Ikeuchi, Kyushu University, Japan*
- Introduction
- Effect of high pressure on the quality of meat and meat products
- Pressure-processed meat products
- Microbial control in meat and meat products using high pressure
- New applications of high pressure technology in the meat industry
- Future trends in high pressure processing (HPP)
- References

**Effects of novel thermal processing technologies on the sensory quality of meat and meat products**
*J F Kerry, Echo Ovens Ltd, Ireland*
- Introduction
- Meat quality
- Thermal processing
- Thermal processing methods
Packaging of cooked meats and muscle-based convenience-style processed foods

M Cruz-Romero and J P Kerry, University College Cork, Ireland

- Introduction
- Cooked meat products
- Definition of packaging and its functions
- Influence of key trends on consumer behaviour
- Consumer trends in food packaging
- Choosing packaging materials for cooked meat products
- Packaging materials and forms used on cooked meats and muscle-based convenience-style food products
- Developments and recent advances in the use of packaging materials for cooked meats and muscle-based, convenience-style food products
- Future trends
- References
