Contents

PART 1 EXPERT INTERVIEW WITH BRUCE TOMPKIN

Interview with a food safety expert: Dr R. Bruce Tompkin
R B Tompkin, Retired, USA and J Sofos, Colorado State University, USA
- Food safety: past and current
- Food safety management systems
- Future efforts to further control food safety concerns

PART 2 PATHOGEN UPDATES

Pathogen update: Salmonella
T Hald, DTU, Denmark
- Introduction
- Incidence and burden of human salmonellosis
- Epidemiology and disease transmission in humans
- Classification and subtypes
- Tracing the sources of human salmonellosis - source attribution
- Discussion on sources to human salmonellosis
- References

Pathogen update: Listeria monocytogenes
J Chen and K Nightingale, Texas Tech, USA
- The genus Listeria, L monocytogenes and listeriosis
- Listeriosis: epidemiology, virulence factors and evolution
- In vitro and in vivo models to assess virulence
- Ecology, transmission and genetic diversity of L Monocytogenes
- Regulations and risk assessments
- Conclusions
- References

Pathogen update: Bacillus species
F Carlin, INRA, France and C Nguyen-the, INRA, France
- Introduction
- Bacillus cereus in food: characterisation and taxonomy
- Poisoning caused by B cereus and other Bacillus spp
- Control of Bacillus species in foods and food processing
- Conclusion
- References

Pathogen update: Vibro species
M Strom, National Oceanic and Atmospheric Administration, USA
- Introduction
- Source of infection, types of pathology
- Virulence and strain variability
- Current risk management Other human food-borne pathogenic vibrios
- Current and future trends
- References

Emerging parasites in food
Y Ortega, University of Georgia, USA
- Introduction
- Protozoa
- Cestoda
- Nematoda
- Trematoda
- Epidemiology, prevention and control
Conclusions

New research on antimicrobial resistance in foodborne pathogens
J Threlfall, HPA, UK
- Introduction
- Increasing occurrence of resistance to quinolones and cephalosporins in Salmonella
- Increasing occurrences of resistance to quinolones and macrolides in Campylobacter
- The recent emergence and spread of new multidrug-resistant clones of monophasic ‘Salmonella Typhimurium-like’ organisms
- Rapid emergence and spread of strains of Enterobacteriaceae, and in particular Escherichia coli, exhibiting resistance to extended spectrum beta (β)-lactamases (ESBLs) or producing AmpC (β)-lactamases, control measures
- References

Antibiotic resistance development and identification of response measures
T Kuile and S Brul, University of Amsterdam, The Netherlands
- Introduction
- Existing international risk assessments
- Control targets
- Monitoring and reporting usage and resistance
- Reservation of antibiotics for human health care
- Prudent use
- Role of the competent authorities
- Responsibilities for veterinarians
- Farmers mission
- Conclusion
- Control measures that can be implemented immediately
- References

PART 3 PATHOGEN SURVEILLANCE, DETECTION AND IDENTIFICATION

Advances in separation and concentration of microorganisms from food samples
L Jaykus and S H Suh, North Carolina State University and Byron Brehm-Stecher, Iowa State University, USA
- Introduction
- The need for pre-analytical sample processing
- Emerging approaches
- Conclusions
- References

Second generation polymerase chain reaction (PCR) and DNA microarrays for in vitro and in situ study of foodborne pathogens
K Rantsiou and L Cocolin, University of Turin, Italy
- Introduction
- Quantitative polymerase chain reaction (PCR)
- Transcriptomics
- Conclusions and future trends
- References

New approaches in microbial pathogen detection
J Irudayaraj, Purdue University, USA
- Introduction
- Detection methods
- Emerging methods
- Future trends
- References
Tracking of pathogens via virulence factors: Shiga toxin-producing Escherichia coli in cattle and potential risk for human disease

J Elder, Colorado State University and K Nightingale, Texas Tech, USA

Introduction
- The impact of Shiga toxin-producing E.coli (SHEC) on public health
- STEC virulence factors
- Prevalence of STEC in cattle and other reservoirs
- Challenges and considerations for the detection of STEC
- Summary and discussion
- References and further readings

New research on estimating the global burden of foodborne disease

R Lake, Institute of Environmental Science and Research, New Zealand, A H Havelaar, National Institute for Public Health and the Environment, The Netherlands and T Kuchenmuller, WMO, Denmark

Introduction
- Estimating the burden of foodborne diseases: metrics and attribution
- Foodborne Disease Burden Epidemiology Reference Group (FERG) structure and process
- FERG outputs to date
- Future trends
- References and additional reading

PART 4 FOOD PRESERVATION TECHNIQUES

Novel methods for pathogen control in livestock preharvest: an update

T R Callaway, R C Anderson, T S Edrington, K J Genovese, R B Harvey, T L Poole and D J Nisbet, USDA-ARS, USA

Introduction
- Foodborne pathogenic bacteria: Human exposure routes
- The gastrointestinal tract microflora and ecological inertia
- Delineation of anti-pathogen versus pro-commensal strategies
- Competitive enhancement strategies to reduce food-borne pathogens
- Direct anti-pathogen strategies to reduce food-borne pathogens
- Animal management intervention strategies
- Future trends
- Conclusions
- References

New research on ensuring safety in dry processing environments

J-L Cordier, Nestlé Quality Assurance Center, Switzerland

Introduction
- Control measures applied during the manufacture of low-moisture products
- Survival of pathogens low-moisture products and environments
- Fate of pathogens low-moisture processing environments
- Cleaning procedures
- Verification of control measures
- Disinfection and use of sanitizers
- Conclusion
- References

New research on bacteriophage and food safety

J Klumpp and M J Loessner, ETH Zurich, Switzerland

Introduction
- Bacteriophages of foodborne pathogens
- General considerations for bacteriophage application
- Phage preparations for pathogen detection and control
- Bacteriophage lytic enzymes and their application in food
- Pathogen detection
Conclusions
References

New research on MAP and pathogen behaviour
A Vermeulen, P Ragaert, A Rajkovic, S Samapundo, F Lopez-Galvez and F Devlieghere, Ghent University, Belgium
- Introduction
- Trends in packaging configurations
- Effect of packaging configuration on food safety
- Critical evaluation of current research on modified atmosphere packaging and food safety and some future research trends
- References

New research on organic acids and pathogen behaviour
K Koutsoumanis, Aristotle University of Thessaloniki and P Skandamis, Agricultural University of Athens, Greece
- Introduction
- Applications of organic acids in fresh meat decontamination
- Application of organic acids in fresh produce decontamination
- Risks and concerns: microbial adaptation
- Legislation aspects
- Conclusion
- References and further reading

Progress in intervention programmes to eradicate foodborne helminth infections
K Kniel, University of Delaware, USA
- Introduction
- Foodborne helminth infections and food animal contamination
- Impact of intervention programs
- Future directions
- References

PART 5 PATHOGEN CONTROL MANAGEMENT

Advances in understanding of the impact of personal hygiene and human behaviour on food safety
C Griffith, Editor of British Food Journal, UK
- Introduction
- Food handler knowledge and practices
- Food handlers, cross contamination and hand hygiene
- Food safety culture
- Food hygiene training
- Conclusion and future trends
- Further reading
- References

Expanding the use of HACCP beyond its traditional application areas
W H Sperber, Retired, USA
- Introduction
- Historical perspective
- Contemporary perspective
- Expansion of HACCP beyond traditional areas of application
- Necessary and practical food safety improvements
- Barriers to food safety progress
- A plan for global food safety progress
- References
Biotracing in food safety
G C Barker, Institute of Food Research, UK
- Introduction
- Elements of biotracing
- Biotracing in food chain systems
- Conclusion
- References

PART 6 UNDERSTANDING AND MODELLING PATHOGEN BEHAVIOUR

Advances in single-cell approaches for the study of foodborne pathogens
B Brehm-Stecher, Iowa State University, USA
- Introduction
- Single-cell analyses in food microbiology
- Advances in single-cell techniques for the study of foodborne pathogens
- Conclusion and future trends
- References

Advances in genomics and proteomics-based methods for the study of foodborne bacterial pathogens
P Fratamico, USDA-ARS, USA
- Introduction
- Genomic technologies: sequencing, typing and profiling
- Functional genomics
- Molecular serotyping, subtyping and metagenomics
- Food-based proteomic investigations (including introductory section ‘Proteomic-based techniques’)
- Mass spectrometry
- Future trends
- References

Next generation of predictive models
J Baranyi, A Metris and C Pin, Institute of Food Research, UK
- Introduction
- Models at cell-population level
- Models at single-cell level
- Molecular level
- Conclusions
- References
