Contents

- Principles of food fortification and supplementation

Part 1 Technological aspects

- Forms of food supplements
- Vitamin and mineral fortification of foods
- Fortification with substances other than vitamins and minerals (polyphenols, carotenoids, fatty acids and phytosterols)
- Using polyunsaturated fatty acids (PUFAs) as functional ingredients
- The stability of vitamins in fortified foods and supplements
- Technical aspects of micronutrient addition to foods

Part 2 Analysis, safety and regulation

- Vitamin analysis in fortified foods and supplements
- Analysis of fatty acids in fortified foods
- Analysis of polyphenol antioxidants in fortified foods and supplements
- Assessing the bioavailability of nutraceuticals
- Codex Alimentarius standards affecting fortified foods and supplements
- European legislation on fortified foods and supplements
