Contents

Part 1 Meat composition and additives

- The protein and fat content of meat
- The biochemistry of meat
- The tenderness of fresh meat
- Definitions of terms used in meat science and technology
- Additives: phosphates, salt (sodium chloride) and hydrocolloids
- Additives: proteins, carbohydrates, fillers and other additives
- Colour in fresh meat and cured meat products

Part 2 Technologies for particular meat products

- Cooked ham: whole muscle, brine-injected products
- Typical whole muscle, brine-injected cooked ham products from around the world
- Cooked ham: non-injection methods for adding brine
- Typical cooked ham products from around the world using non-injection methods for adding brine
- Cooked sausages
- Typical cooked sausage products from around the world
- Fresh sausages
- Typical fresh sausage products from around the world
- Raw fermented salami
- Typical raw fermented salami products from around the world
- Semi and fully-cooked fermented salami
- Non-fermented salami
- Typical non-fermented salami products from around the world
- Spreadable raw fermented sausage
- Typical raw fermented sausage products from around the world
- Cured air-dried meat products
- Typical cured air-dried meat products from around the world
- Spreadable liver sausage and liver-pâté
- Typical liver sausage and liver-pâté products made around the world
- Burgers, patties and crumbed products
- Typical patty and nugget products from around the world
- Sliceable and non-sliceable blood sausage
- Typical blood sausage products from around the world
- Brawn and meat jelly
- Typical brawn and meat products from around the world
- Canned retorted corned beef
- Moisture-enhanced (case-ready) and marinated meat
- Casings and packaging material

Part 3 Quality and safety issues

- Sensory evaluation of meat products
- HACCP in meat processing companies
- The microbiology of meat and meat products
- The microbiology of specific bacteria
- Predictive microbiology for meat products
