Contents

Part I - Consumers, texture and food quality

- Measuring consumer perception of texture: an overview
- Consumers and texture: understanding their perceptions and preferences
- Texture and mastication
- Understanding and measuring consumer perception of crispness

Part II - Instrumental techniques for analysing texture

- Force/deformation techniques for measuring texture
- Sound input techniques for measuring texture
- Near infrared (NIR) diffuse reflectance in texture measurement
- Nuclear magnetic resonance (NMR) and magnetic resonance imaging (MRI) in texture measurement
- Modelling food texture

Part III - Understanding and improving the texture of particular foods

- Plant structure and fruit and vegetable texture
- Plant compounds and fruit texture: the case of pear
- Controlling the texture of fruit and vegetables: the role of oxidising enzymes
- Improving fruit and vegetable texture by genetic transformation
- Raw materials quality and the texture of processed vegetables
- Improving the texture of processed vegetables by vacuum infusion
- Improving the texture of frozen fruit: the case of berries
- Improving the texture of frozen fruit: the case of olives
- Improving the texture of bread
- Analysing and improving the texture of cooked rice
- Improving the texture of pasta
- Improving the texture of fried food
